

ABSTRACT OF THE DISCLOSURE

An apparatus for treating objects, in particular cytological or histological specimens, having multiple processing stations (3) arranged in a housing (2) and having a transport device (5) for delivering the objects, or the object carriers (4) carrying the  
5 objects, into and out of the processing stations (3), is characterized by a region, coordinated with the processing stations (3), for the reception of modular treatment stations (10) having permanently definable functions.

(FIG. 1)
